READING

Direction (Q. No. 8 to 10) : Read the passage and answer the questions that follow.

Once upon a time, everybody “did” science, for their own amusement and excitement. All of us, as children, are scientists too—tasting substances on our tongues, discovering gravity, peering under rocks, seeing patterns in the stars, wondering what makes the night scary and the sky blue.

Partly because the education system has taught

science only in a reductionist, left-brain style and partly because of society's demands for practical applications of technology, the love of science fades quickly for most youngsters. Those who love nature but dislike dissecting small animals soon learn to avoid high-school biology. Students who enroll in psychology courses, hoping to learn something about how people think and feel, find themselves learning more about rats and statistics than they ever wanted to know.

8. According to the author, all children are scientists because they _____.
(A) are amused and excited by science
(B) are curious about some things
(C) are taught science in school
(D) enjoy peeping into things, tasting and wondering

9. Children do not enjoy science in school because _____.

- (A) they are made to study technology
(B) they are forced to dissect animals
(C) it is taught in a boring manner
(D) it is not taught in a romantic style

10. According to the author, a psychology course should focus on _____.
(A) the study of rats
(B) problems in statistics
(C) an analysis of nature
(D) understanding human beings
