## TEXTBOOK MEETS REAL WORLD

### Teach students real-world application of concepts!

It might seem like just foam and minty freshness, but there's real science happening every time you brush your teeth.

Toothpaste contains mild abrasives and fluoride. The abrasives scrub away food particles and plaque, while fluoride strengthens enamel by bonding with calcium and phosphate in your teeth. This reinforces your teeth's defences against decay, turning your morning routine into a tiny battle of chemistry!

## TEACHERS' HELPDESK

### OLYMPIAD PREPARATION STRATEGIES FOR TEACHERS

#### Tips for Teaching Olympiad-Level Syllabus Effectively!

- **Start With the 'Why' Before the 'How'**

Show them the beauty or real-world impact of a concept before diving into formulas.  
A curious mind learns faster than a memorising one.

- **Think in Layers, Not Leaps**

Break tough problems into bite-sized logical steps.  
Guide them from intuition → pattern → principle → proof.

- **Make Mistakes Normal (and Useful)**

Discuss why wrong answers happen—it builds resilience.  
Olympiads are more about thinking than always being right.

- **Practice is Strategy, Not Repetition**

Don't just "do more problems"—reflect on how they solved it.  
Use past questions to teach techniques, not just test speed.

## MYTH VS FACT

#### Become the Myth Buster of Your Students!

**Myth:** Bats are blind and can't see anything.

**Fact:** Bats can see, and some species have excellent vision, especially in low light. They use echolocation for navigation, but it's not because they are blind—it's an extra tool to help them find food and avoid obstacles.

## DIY DIARIES: TURN CREATIVITY INTO CREATIVE LEARNINGS

### How to Grow a Kidney Bean Plant in a Jar (Step-by-Step)

#### Step 1: Soak the Beans

Place 1–2 kidney beans in water overnight to soften them.

#### Step 2: Prepare the Jar

Fill the bottom of a clear glass jar with moist cotton balls.

#### Step 3: Place the Beans

Gently press the soaked beans between the cotton and the jar wall so they're visible from outside.

#### Step 4: Add Water

Sprinkle a little water to keep the cotton damp, but not soaked.

#### Step 5: Set in Sunlight

Place the jar near a window where it gets indirect sunlight.

#### Step 6: Water Daily

Check the cotton every day and add a few drops of water to keep it moist.

#### Step 7: Observe Growth

In 2–3 days, roots will appear. In 4–5 days, the shoot will grow upward.

#### Step 8: Transplant (Optional)

After 10–14 days, you can move the plant to a pot with soil.
